Full Stack AI Engineer bridging **applied AI research** and **product development** by building scalable **ML pipelines**, enterprise **RAG systems**, and production-ready **full-stack applications**.

WORK EXPERIENCE

Full Stack Engineer WREN	Jun 2026 - Aug 2026 United Kingdom
• Sole engineer on a contracted MVP build for a UK children's sleep product: Next.js PWA + Supabase/Postgres, shipped ahead of a 50-family validation study • Designed the data model and rules engine converting nightly parent logs into one human-reviewed weekly recommendation • Enforced consent, age gating, and row-level security (RLS) at the database layer; built export, revoke, and wipe flows for UK GDPR and Children's Code compliance • Built the operator review console and the app's shared design-system components	
Data Science Trainee Infosys	Dec 2025 - May 2026 Mysore
• Applied linear algebra, multivariate calculus, and probability to custom-tune loss functions and optimizers, improving model accuracy 15% over baselines. • Built and trained deep learning models in PyTorch and TensorFlow, optimizing forward/backward passes to cut training time 30% on 500GB+ datasets. • Developed an end-to-end AI research pipeline for unstructured scientific data, reducing manual analysis time 40%. • Implemented graph neural networks from research papers, verifying adjacency matrices to lift predictive performance 22% on relational data. • Built data ingestion and feature engineering workflows, cutting pipeline latency 45% and accelerating convergence. • Ran hyperparameter optimization and ablation studies, improving inference accuracy 18%.	

PROJECTS

Papyrus (Scientific RAG Assistant) 	May 2026 - May 2026
• Built a full-stack Retrieval-Augmented Generation (RAG) system for scientific literature Q&A, enabling users to ask natural-language questions and receive cited, grounded answers backed by source documents • Implemented hybrid retrieval combining dense vector search (OpenAI text-embedding-3-small + pgvector) with keyword search, fused via Reciprocal Rank Fusion (RRF) for improved ranking accuracy • Engineered a multi-stage pipeline: PDF ingestion → LangChain chunking → embedding → pgvector indexing → hybrid retrieval → LLM reranking (scored 0–10) → answer synthesis with inline citations • Integrated Google OAuth 2.0 + JWT authentication with role-based access control, gating upload/delete operations to authenticated users • Reduced redundant LLM calls with Redis caching (1-hour TTL), serving repeated queries from cache without re-running retrieval • Containerized the full stack using Docker Compose PostgreSQL, Redis, FastAPI (Uvicorn), and Next.js with an Nginx reverse proxy for production deployment • Designed modular service architecture (retriever, reranker, generator, cache, embedder) with health-check endpoints monitoring all dependencies	

SKILLS

Programming Languages: Python, Typescript, JavaScript, C++
AI & Machine Learning: PyTorch, TensorFlow, Scikit-learn, Neural Network Architectures,
Generative AI & LLMs: Retrieval-Augmented Generation (RAG), Vector Embeddings, LLM Orchestration, Prompt Engineering
MLOps & Deployment: Docker, CI/CD for ML, Model Serving (vLLM, TorchServe), Cloud AI Services, MLflow, Weights & Biases
Full-Stack & Databases: React.js, Node.js, Express.js, PostgreSQL, Vector Databases (pgvector, Pinecone), RESTful APIs
Mangement & Tools: Git, GitHub, Linux/Unix CLI, Model Evaluation & Hyperparameter Tuning

EDUCATION

B.Tech Computer Science and Engineering, AIML Specialization	Nov 2021 - Jun 2025
Lakshmi Narain College Of Technology, Bhopal, India	GPA: 7.86

AWARDS

Graduate Aptitude Test in Engineering (GATE) by Department of Higher Education, India	Feb 2026
All India Rank 5472 out of 69242 in Data Science and Artificial Intelligence (DA) branch.
